Logic = study of correct reasoning

In the beginning

Aristotle +/- 350 B.C.

Organon

19 syllogisms

Barbara syllogism

All K's are L's All L's are M's

All K's are M's

Barbara syllogism

only later called so, in the Middle Ages

All K's are L's All L's are M's

All K's are M's

only later called so, in the Middle Ages

All K's are L's All L's are M's

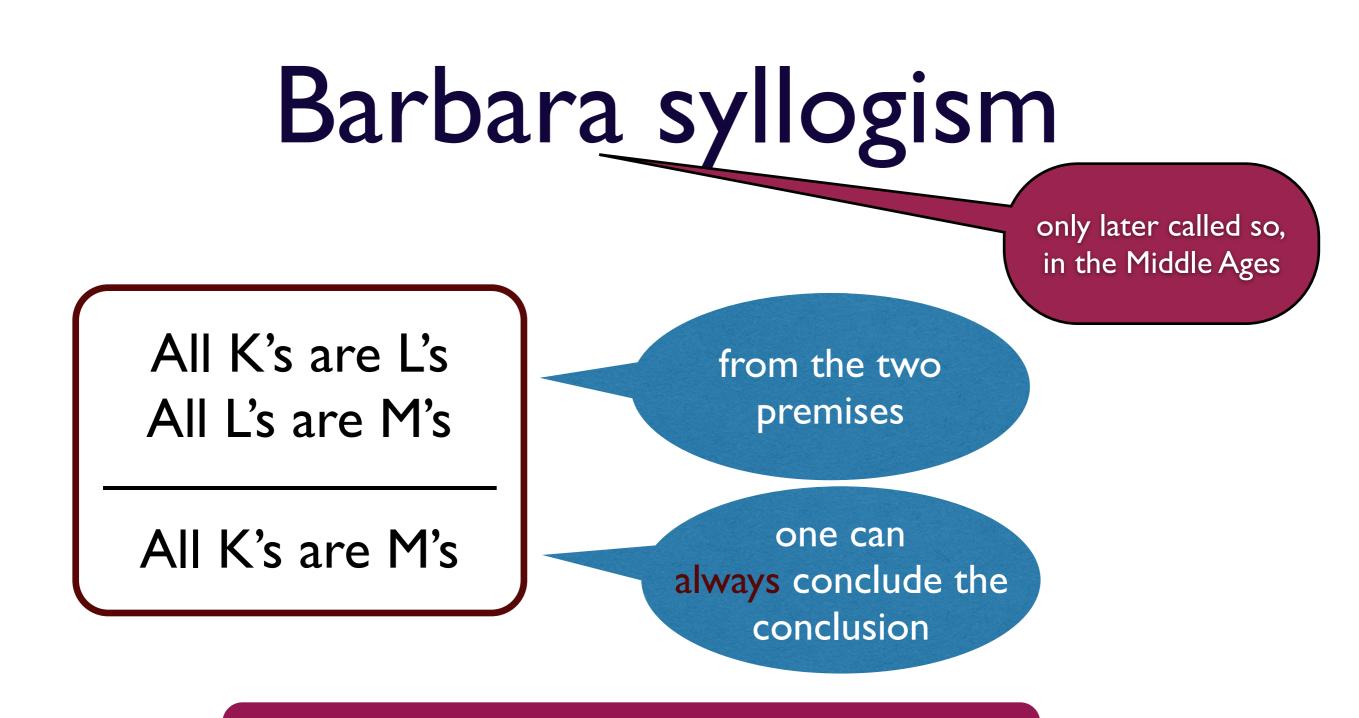

All K's are M's

from the two premises

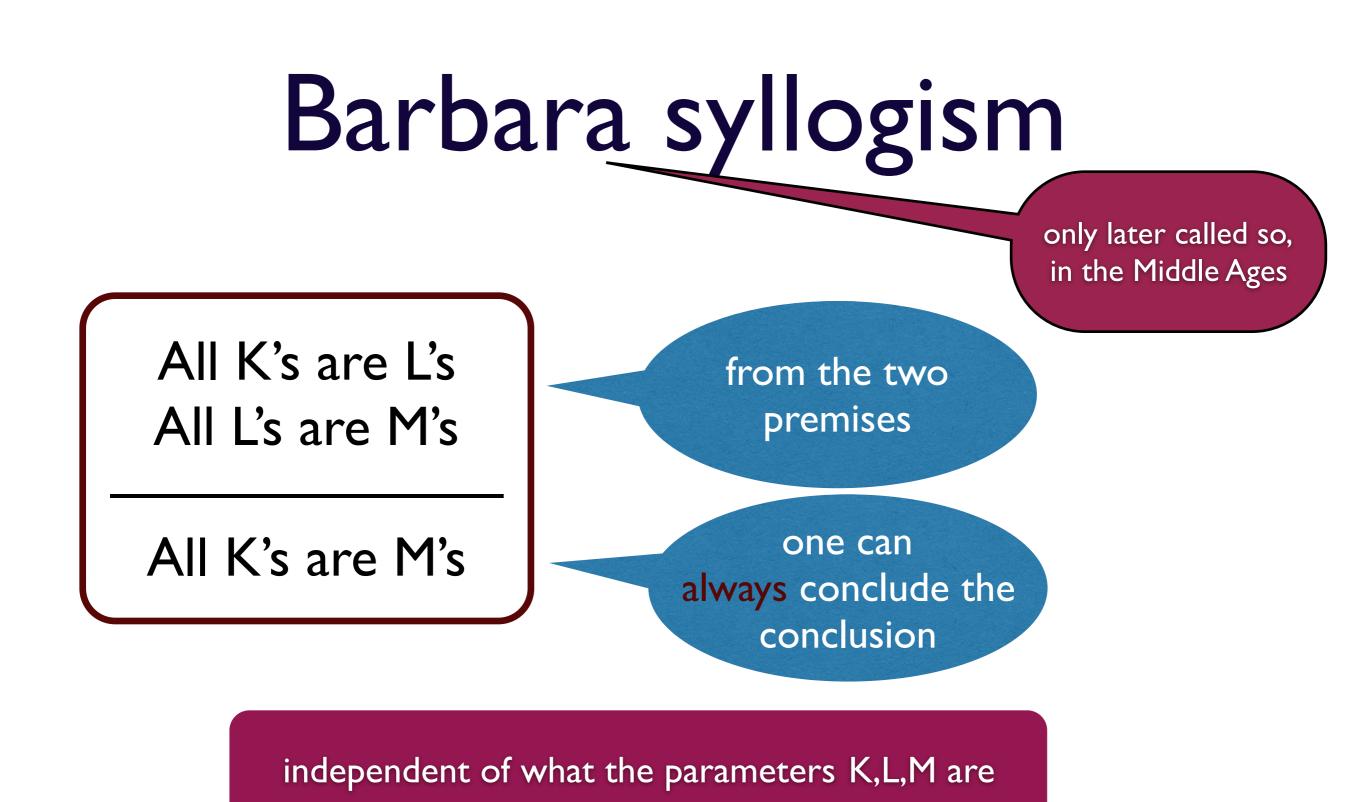

All K's are M's

one can always conclude the conclusion

independent of what the parameters K,L,M are

Logic (Logos, Greek for word, understanding, reason) deals with general reasoning laws in the form of formulas with parameters.

Def. A proposition (Aussage) is a grammatically correct sentence that is either true or false.

Def. A proposition (Aussage) is a grammatically correct sentence that is either true or false.

logic deals with patterns! what matters are not particular propositions but the way in which (abstract) propositions are combined and what follows from them

Def. A proposition (Aussage) is a grammatically correct sentence that is either true or false.

Connectives

- \wedge for "and"
- \vee for "or"
- ¬ for "not"
- \Rightarrow for "if .. then" or "implies"

 \Leftrightarrow for "if and only if"

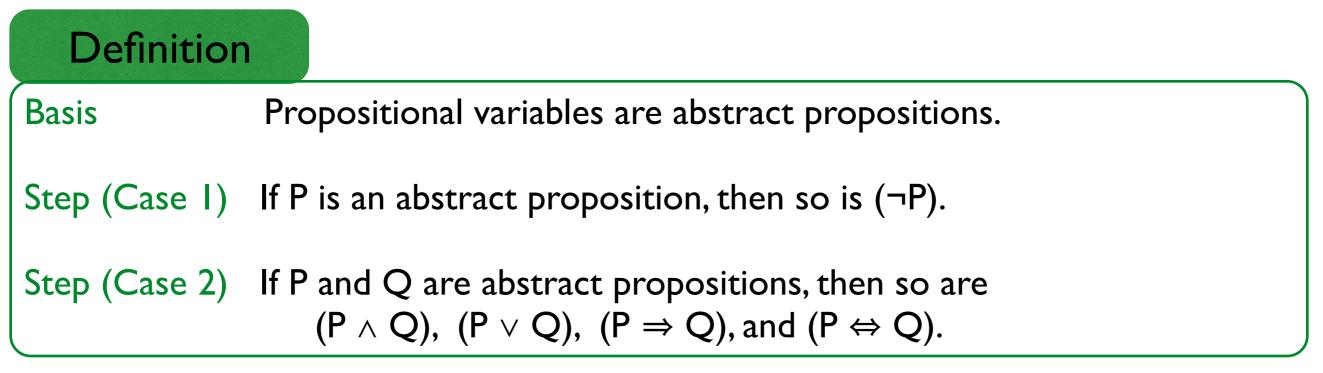

logic deals with patterns! what matters are not particular propositions but the way in which (abstract) propositions are combined and what follows from them

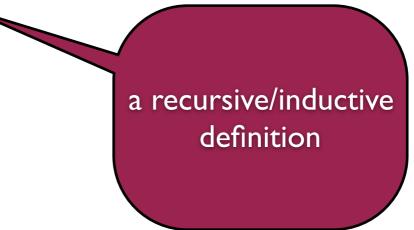

Abstract propositions

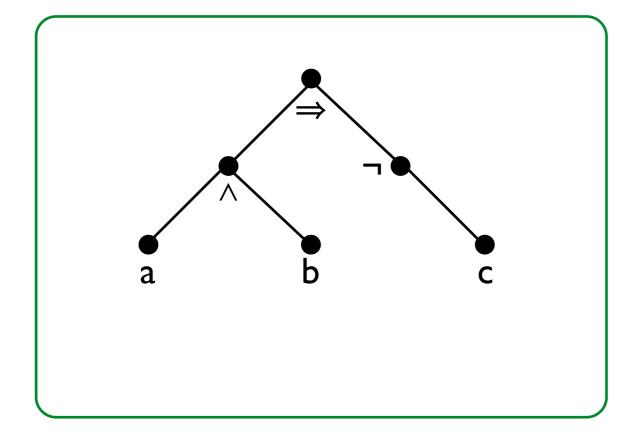

Abstract propositions

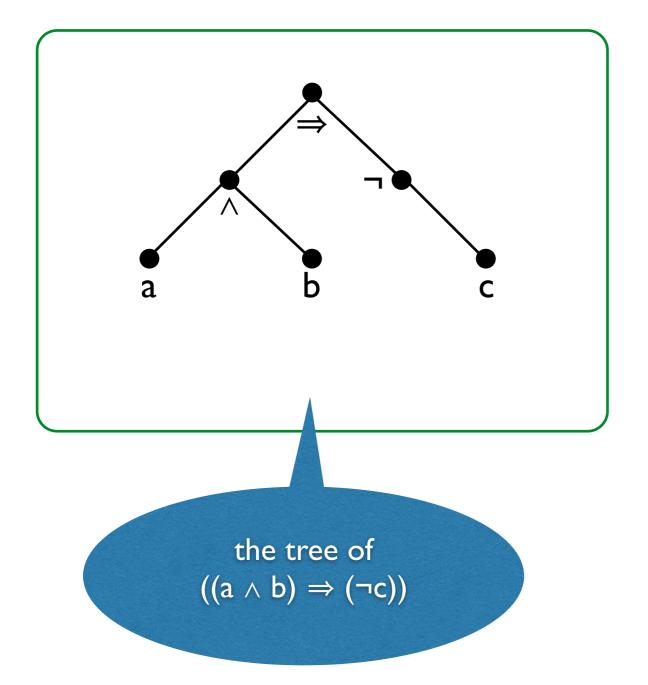

Definition	
Basis	Propositional variables are abstract propositions.
Step (Case I)	If P is an abstract proposition, then so is $(\neg P)$.
Step (Case 2)	If P and Q are abstract propositions, then so are $(P \land Q)$, $(P \lor Q)$, $(P \Rightarrow Q)$, and $(P \Leftrightarrow Q)$.

Def. A truth-function or Boolean function is a function f: $\{0, I\}^n \longrightarrow \{0, I\}$

Def. A truth-function or Boolean function is a function f: $\{0, I\}^n \longrightarrow \{0, I\}$

Property: Every abstract proposition $P(a_1,..,a_n)$ induces a truth-function.

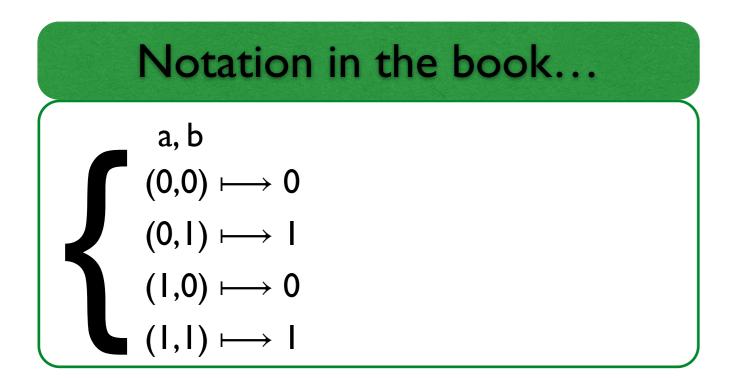

Def. A truth-function or Boolean function is a function f: $\{0, I\}^n \longrightarrow \{0, I\}$

Property: Every abstract proposition $P(a_1,..,a_n)$ induces a truth-function.

by its inductive structure, using the truth tables

Def. A truth-function or Boolean function is a function f: $\{0, I\}^n \longrightarrow \{0, I\}$

Property: Every abstract proposition $P(a_1,..,a_n)$ induces a truth-function.

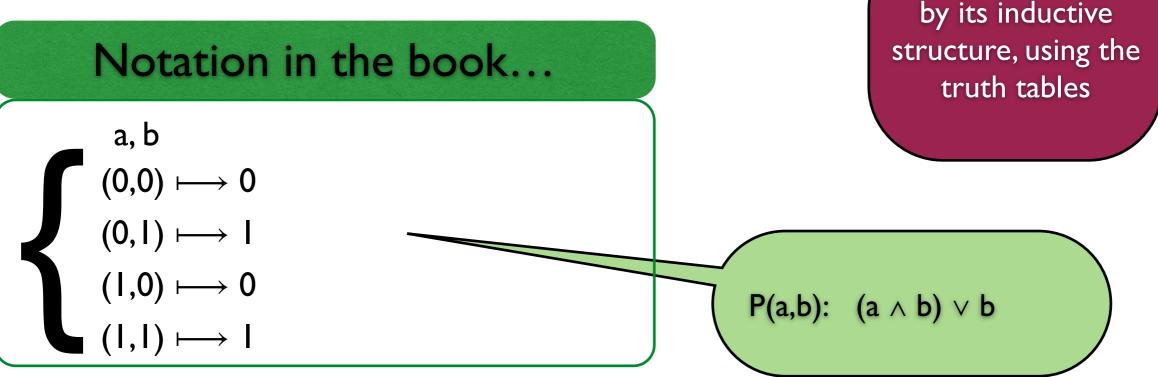

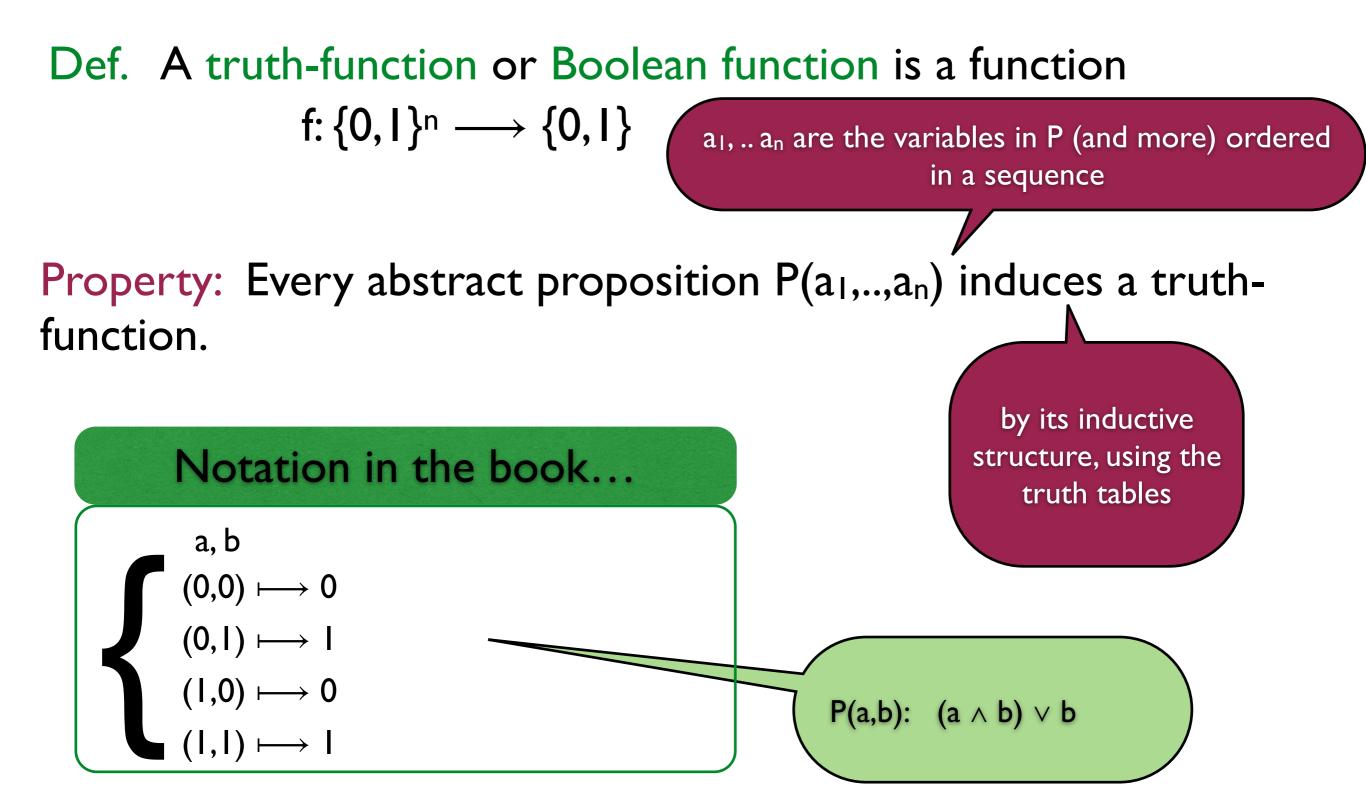

by its inductive structure, using the truth tables

Def. A truth-function or Boolean function is a function f: $\{0, I\}^n \longrightarrow \{0, I\}$

Property: Every abstract proposition $P(a_1,..,a_n)$ induces a truthfunction.

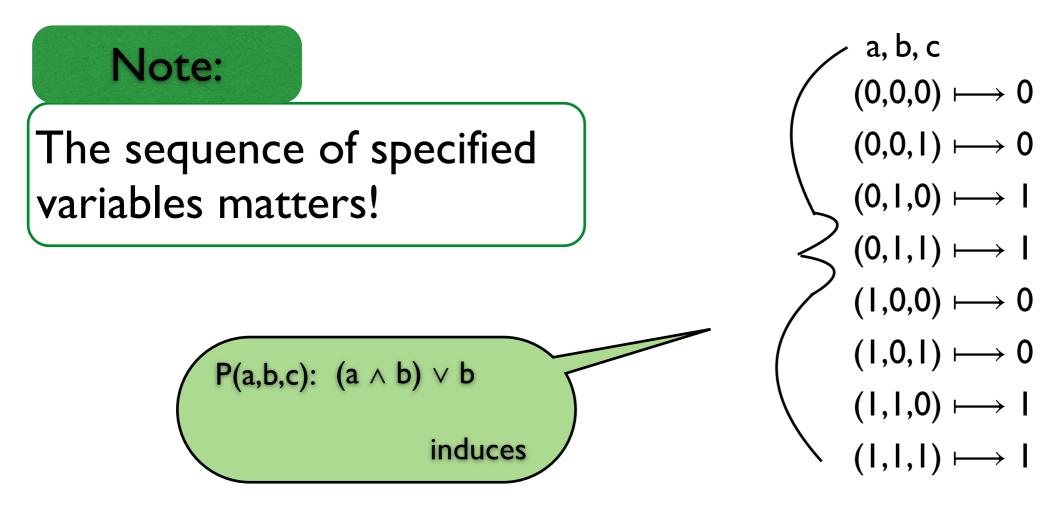

> by its inductive truth tables

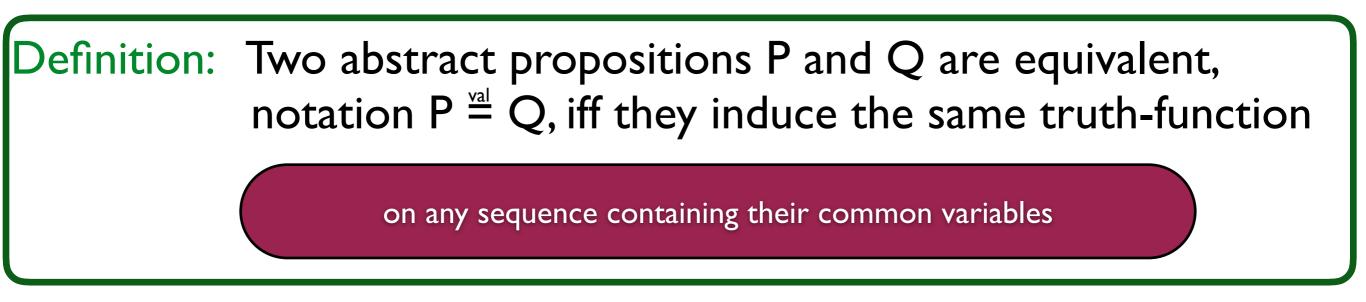

a₁, .. a_n are the variables in P (and more) ordered in a sequence

Property: Every abstract proposition $P(a_1,..,a_n)$ with ordered and specified variables induces a truth-function.

Definition: Two abstract propositions P and Q are equivalent, notation $P \stackrel{\text{\tiny M}}{=} Q$, iff they induce the same truth-function

on any sequence containing their common variables

Property: The relation $\stackrel{\text{val}}{=}$ is an equivalence on the set of all abstract propositions

Definition: Two abstract propositions P and Q are equivalent, notation $P \stackrel{\text{\tiny M}}{=} Q$, iff they induce the same truth-function

on any sequence containing their common variables

Property: The relation [≚] is an equivalence on the set of all abstract propositions

i.e., for all abstract propositions P, Q, R, (1) $P \stackrel{val}{=} P$; (2) if $P \stackrel{val}{=} Q$, then $Q \stackrel{val}{=} P$; and (3) if $P \stackrel{val}{=} Q$ and $Q \stackrel{val}{=} R$, then $P \stackrel{val}{=} R$

b	С	$\neg b$	$\neg c$	$b \land \neg b$	$c \land \neg c$
0	0				
0	Ι				
I	0				
Ι	I				

b	С	$\neg b$	$\neg c$	$b \land \neg b$	$c \land \neg c$
0	0	Ι			
0	Ι	-			
Ι	0	0			
Ι	I	0			

b	С	$\neg b$	$\neg c$	$b \land \neg b$	$c \land \neg c$
0	0	-	I		
0	Η	-	0		
Ι	0	0	I		
Ι	I	0	0		

b	С	$\neg b$	$\neg c$	$b \land \neg b$	$c \land \neg c$
0	0	Ι	Ι	0	
0	Ι	Ι	0	0	
I	0	0	I	0	
Ι	I	0	0	0	

b	С	$\neg b$	$\neg c$	$b \land \neg b$	$c \land \neg c$
0	0	Ι	Ι	0	0
0	Ι	-	0	0	0
Ι	0	0	Ι	0	0
Ι	I	0	0	0	0

Are the following equivalent? $b \land \neg b$ and $c \land \neg c$

b	С	$\neg b$	$\neg c$	$b \land \neg b$	$c \land \neg c$
0	0	Ι	Ι	0	0
0	Ι	Ι	0	0	0
Ι	0	0	I	0	0
Ι	I	0	0	0	0

Their truth values are the same, so they are equivalent $b \wedge \neg b \stackrel{val}{=} c \wedge \neg c$

Def. An abstract proposition P is a tautology iff its truth-function is constant I.

Def. An abstract proposition P is a tautology iff its truth-function is constant I.

Self-equivalence
$$P \Leftrightarrow P \stackrel{val}{=} T$$

Calculating with equivalent propositions (the use of standard equivalences)

Recall...

Definition: Two abstract propositions P and Q are equivalent, notation $P \stackrel{\text{\tiny M}}{=} Q$, iff they induce the same truth-function

on any sequence containing their common variables

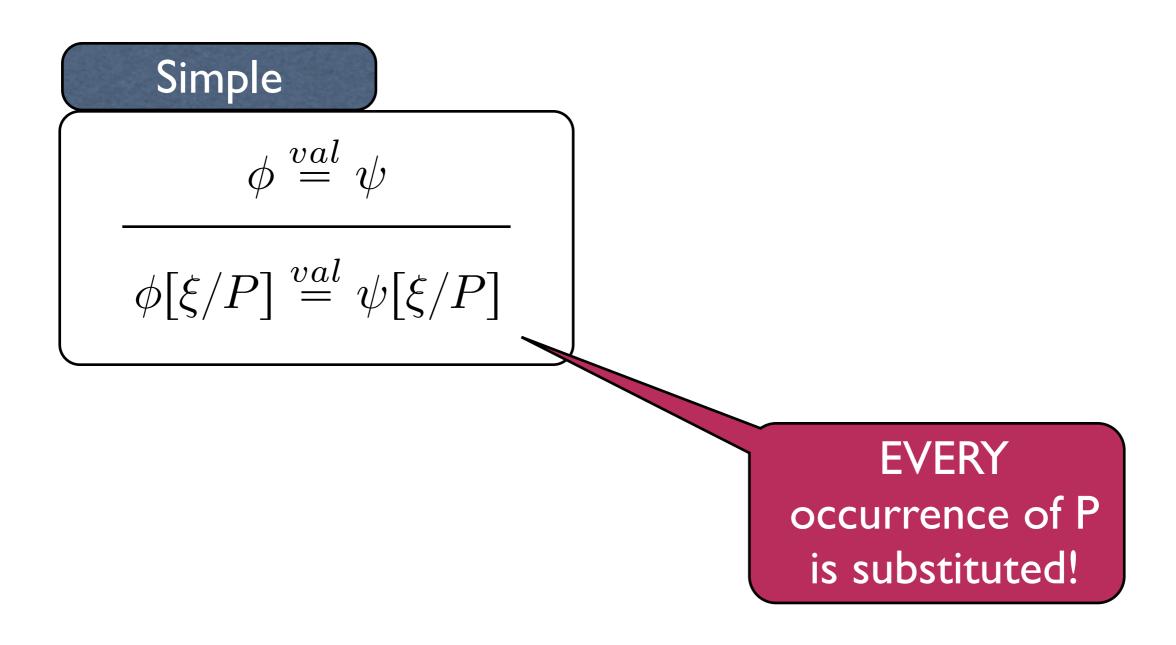

Property: The relation $\stackrel{\text{val}}{=}$ is an equivalence on the set of all abstract propositions.

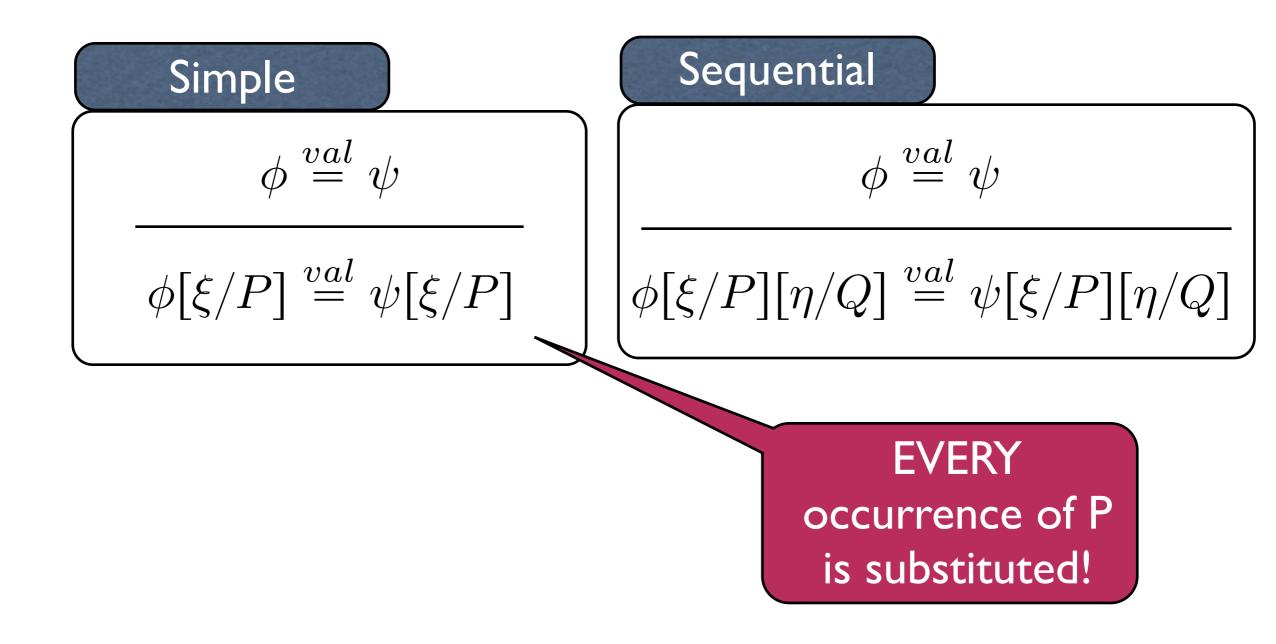

i.e., for all abstract propositions P, Q, R, (1) $P \stackrel{val}{=} P$; (2) if $P \stackrel{val}{=} Q$, then $Q \stackrel{val}{=} P$; and (3) if $P \stackrel{val}{=} Q$ and $Q \stackrel{val}{=} R$, then $P \stackrel{val}{=} R$

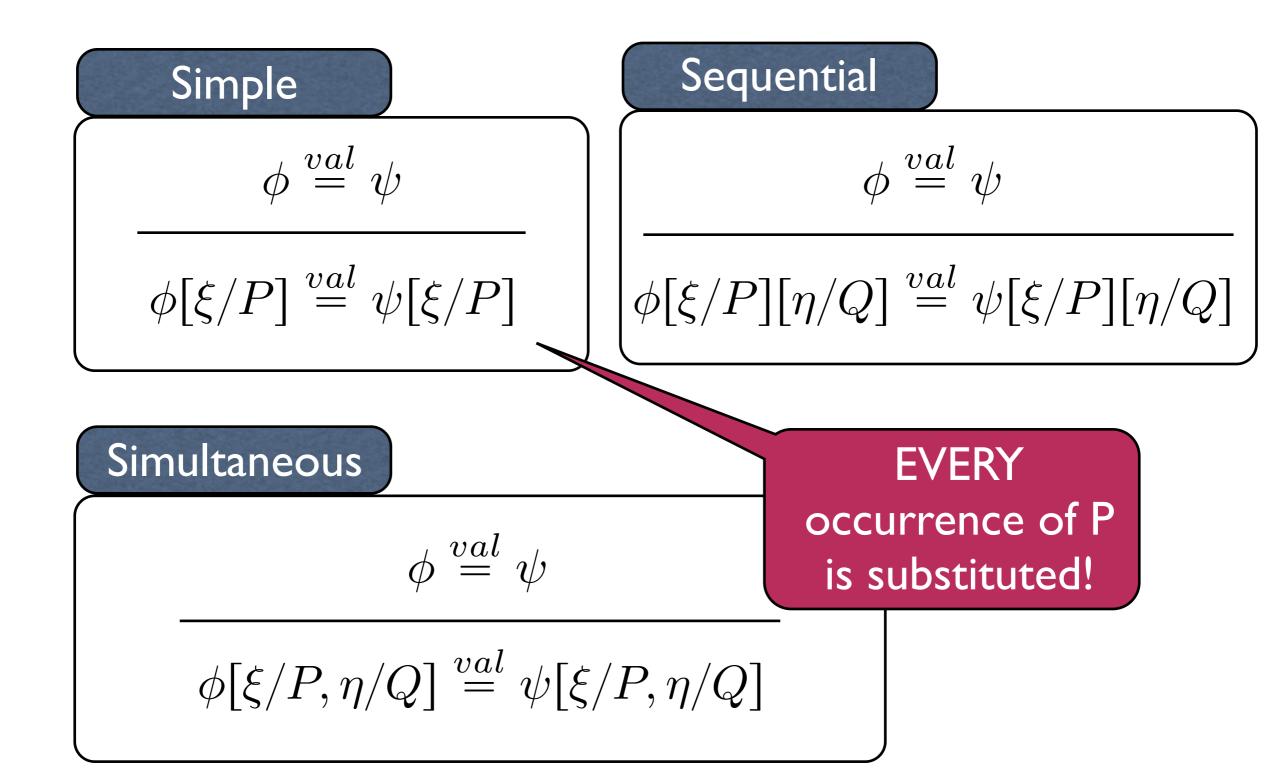

Simple

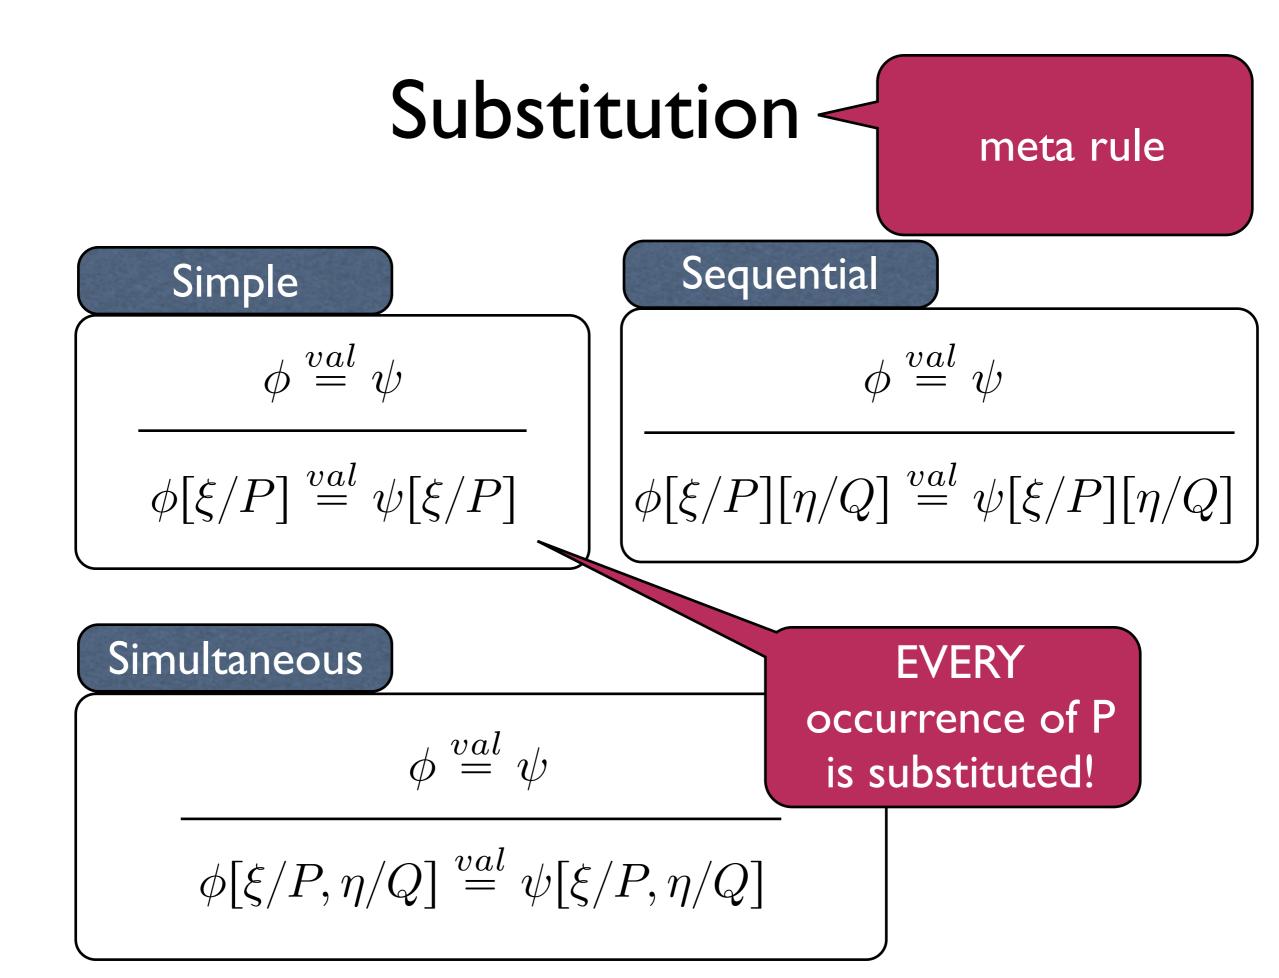

$$\phi \stackrel{val}{=} \psi$$

$$\phi[\xi/P] \stackrel{val}{=} \psi[\xi/P]$$

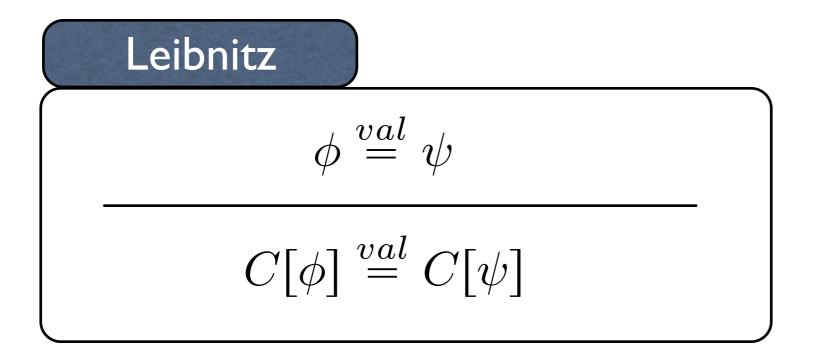

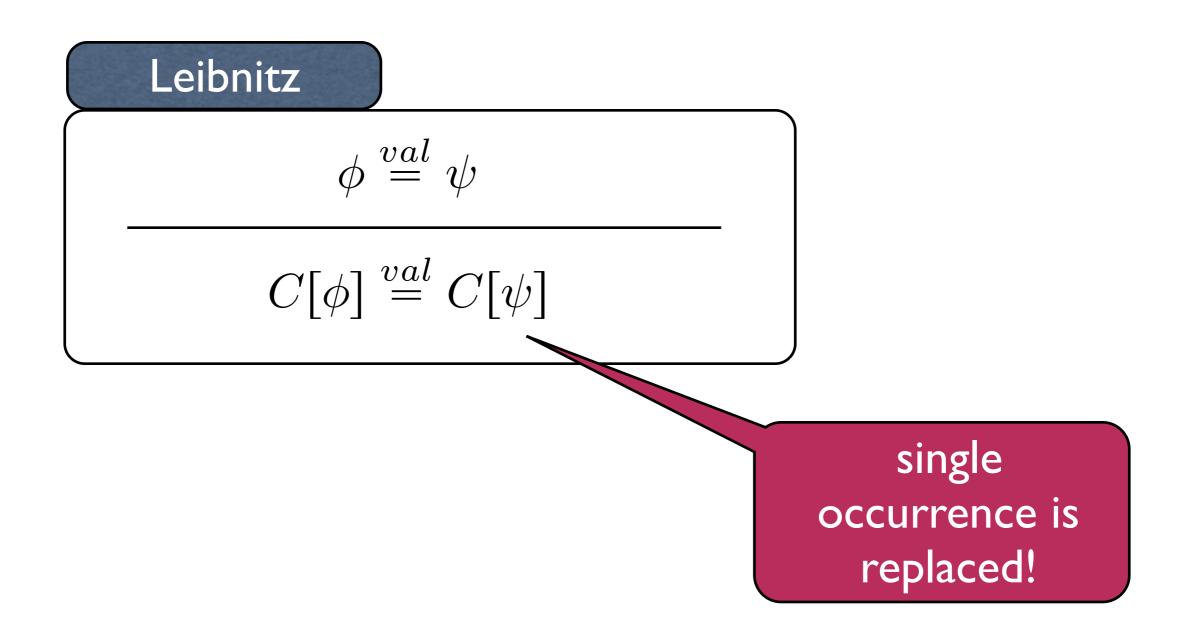

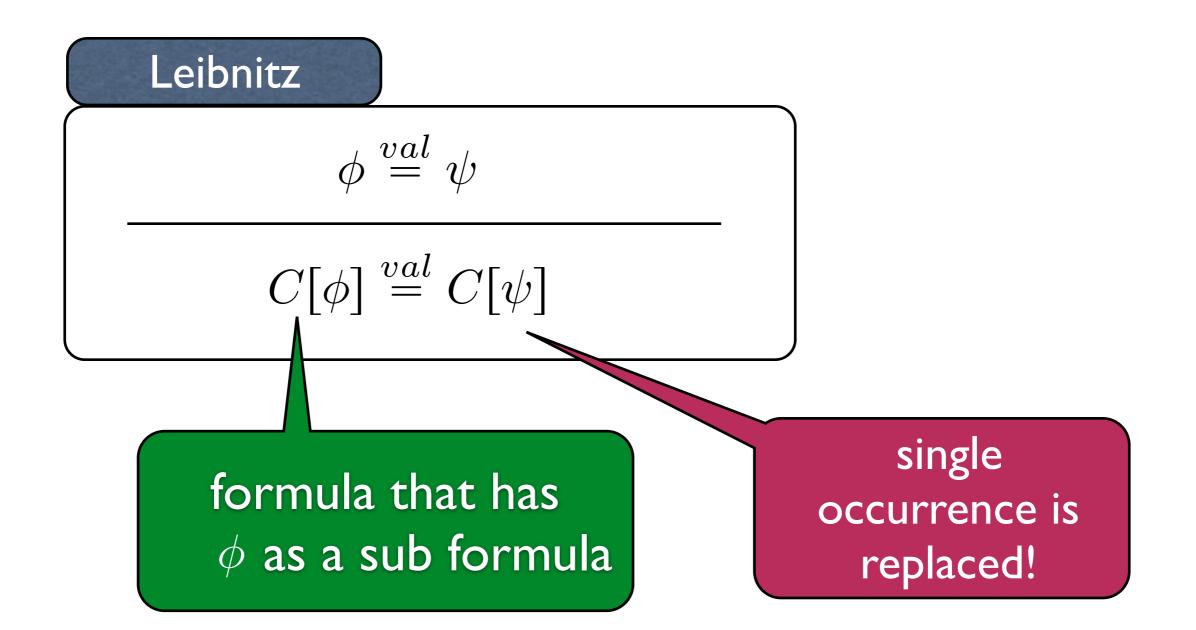

The rule of Leibnitz

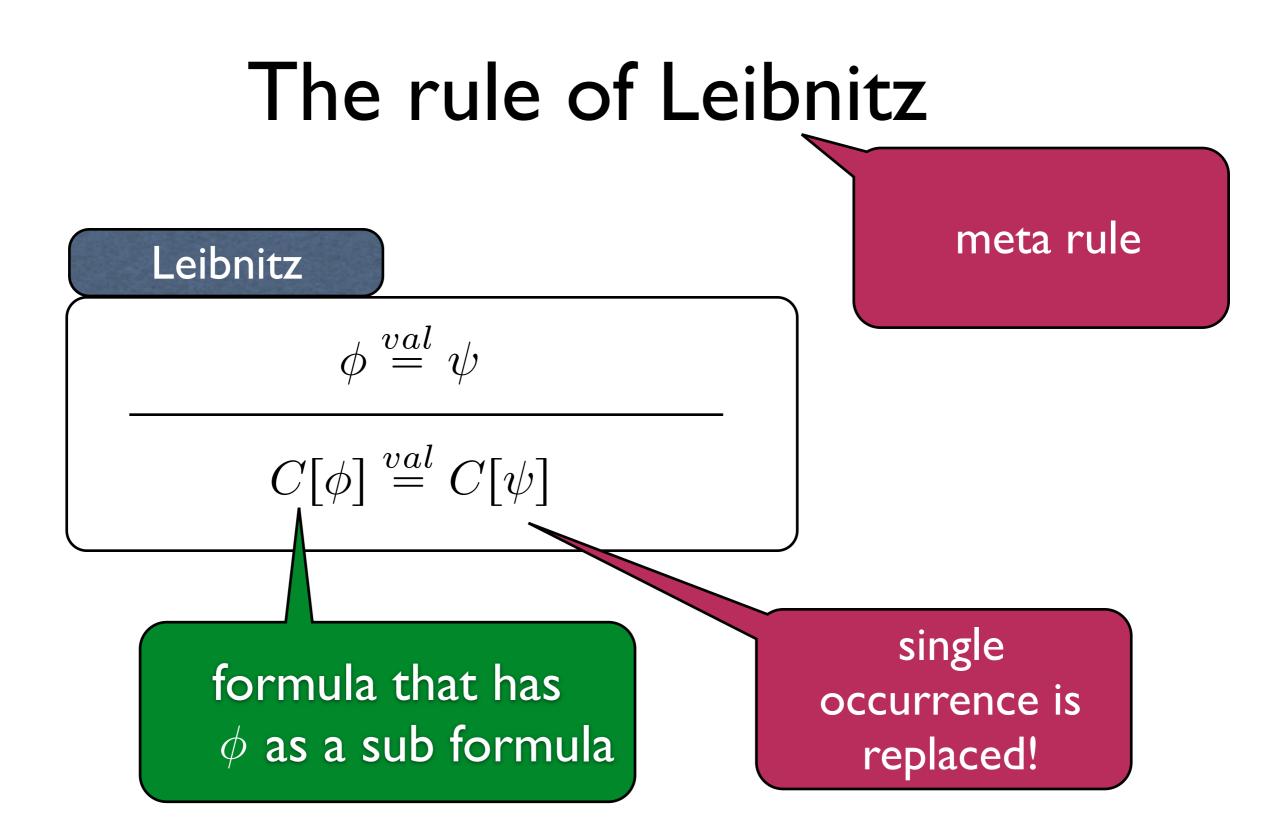

The rule of Leibnitz

The rule of Leibnitz

Strengthening and weakening

We had

Definition: Two abstract propositions P and Q are equivalent, notation P [→] Q, iff
(1) Always when P has truth value I, also Q has truth value I, and
(2) Always when Q has truth value I, also P has truth value I.

We had

Definition: Two abstract propositions P and Q are equivalent, notation P [™] = Q, iff
(1) Always when P has truth value I, also Q has truth value I, and
(2) Always when Q has truth value I, also P has truth value I.

if we relax this, we get strengthening

Definition: The abstract proposition P is stronger than Q, notation P ĕ Q, iff (1) Always when P has truth value I, also Q has truth value I,and (2) Always when Q has truth value I, also P has truth value I.

Definition: The abstract proposition P is stronger than Q, notation P ⊨ Q, iff (1) Always when P has truth value I, also Q has truth value I,and (2) Always when Q has truth value I, also P has truth value I.

> Q is weaker than P

Definition: The abstract proposition P is stronger than Q, notation $P \models^{al} Q$, iff always when P has truth value I, also Q has truth value I.

Definition: The abstract proposition P is stronger than Q, notation P ⊨ Q, iff always when P has truth value I, also Q has truth value I.

> always when P is true, Q is also true

Definition: The abstract proposition P is stronger than Q, notation P ⊨ Q, iff always when P has truth value I, also Q has truth value I.

> always when P is true, Q is also true

Q is weaker than P

Lemma EI: $P \stackrel{val}{=} Q$ iff $P \Leftrightarrow Q$ is a tautology.

Lemma EI: $P \stackrel{val}{=} Q$ iff $P \Leftrightarrow Q$ is a tautology. Lemma EWI: $P \stackrel{val}{=} Q$ iff $P \stackrel{val}{\models} Q$ and $Q \stackrel{val}{\models} P$.

Lemma EI: $P \stackrel{val}{=} Q$ iff $P \Leftrightarrow Q$ is a tautology. Lemma EVVI: $P \stackrel{val}{=} Q$ iff $P \stackrel{val}{\models} Q$ and $Q \stackrel{val}{\models} P$. Lemma W2: $P \stackrel{val}{\models} P$
