Functions, mappings

Def. If A and B are sets, a function (mapping, Abbildung) f from A to B, notation f: $A \longrightarrow B$ is an assignment (of elements of B to elements of A, we write f(a) for the element assigned to a) s. t.

for every $a \in A$, there exists a unique $b \in B$ such that $b = f(a)$.

Functions, mappings

Def. If A and B are sets, a function (mapping, Abbildung) f from A to B, notation $f\colon A \longrightarrow B$ is an assignment (of elements of B to elements of A, we write f(a) for the element assigned to a) s. t.

for every $a \in A$, there exists a unique $b \in B$ such that $b = f(a)$.

the image of a,
$b = f(a)$
$a \mapsto b$

Functions, mappings

Functions, mappings

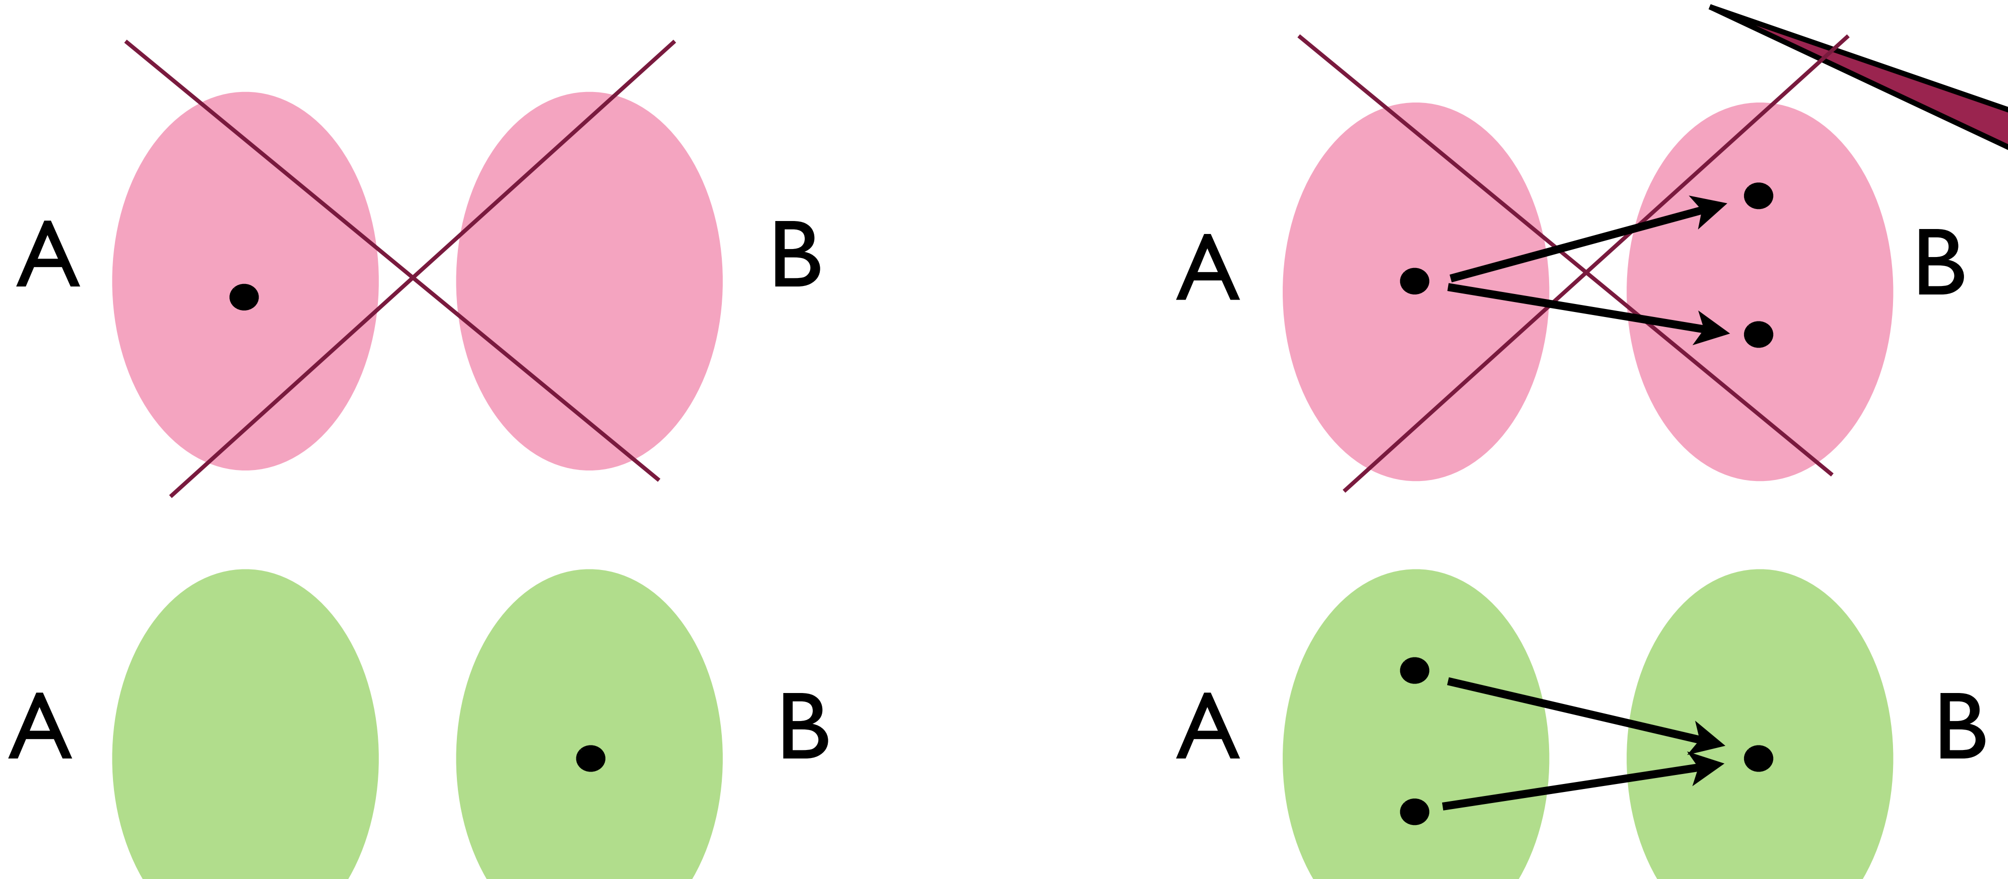
Def. If A and B are sets, a function (mapping, Abbildung) f from A to B, notation $f\colon A \longrightarrow B$ is an assignment (of elements of B to elements of A, we write $f(a)$ for the element assigned to a) s. t.

for every $a \in A$, there exists a unique $b \in B$ such that $b = f(a)$.

the image of a,
$b = f(a)$
$a \mapsto b$



$\{(a, f(a)) \mid a \in A\}$ is the graph of the function f

Functions, mappings

When $f\colon A \longrightarrow B$ then $\operatorname{dom} f = A$ and $\operatorname{cod} f = B$

Functions, mappings

When f: $A \longrightarrow B$ then dom f = A and cod f = B

domain of f
(Definitionsbereich)

Functions, mappings

When f: $A \longrightarrow B$ then dom f = A and cod f = B

domain of f
(Definitionsbereich)

codomain of f
(Wertebereich)

Functions, mappings

When $f\colon A \longrightarrow B$ then dom $f = A$ and cod $f = B$

domain of f
(Definitionsbereich)

codomain of f
(Wertebereich)

Let $f\colon A \longrightarrow B$ and $A' \subseteq A$.

The image (Bild) of A' is the set $f(A') = \{f(a) \mid a \in A'\} \subseteq B$.

Functions, mappings

When $f\colon A \longrightarrow B$ then dom f = A and cod f = B

domain of f
(Definitionsbereich)

codomain of f
(Wertebereich)

Let $f\colon A \longrightarrow B$ and $A' \subseteq A$.

The image (Bild) of A' is the set $f(A') = \{f(a) \mid a \in A'\} \subseteq B$.

if $a \in A'$, then $f(a) \in f(A')$

Functions, mappings

When f: $A \longrightarrow B$ then dom f = A and cod f = B

domain of f
(Definitionsbereich)

codomain of f
(Wertebereich)

Let f: $A \longrightarrow B$ and $A' \subseteq A$.

The image (Bild) of A' is the set $f(A') = \{f(a) \mid a \in A'\} \subseteq B$.

$f(A') = \{b \in B \mid$ there is an $a \in A'$ with $b = f(a)\}$

if $a \in A'$, then $f(a) \in f(A')$

Functions, mappings

When f: $A \longrightarrow B$ then dom $f = A$ and cod $f = B$

domain of f
(Definitionsbereich)

codomain of f
(Wertebereich)

Let f: $A \longrightarrow B$ and $A' \subseteq A$.

The image (Bild) of A' is the set $f(A') = \{f(a) \mid a \in A'\} \subseteq B$.

$f(A') = \{b \in B \mid$ there is an $a \in A'$ with $b = f(a)\}$

if $a \in A'$, then $f(a) \in f(A')$

So f extends to a function f: $\mathcal{P}(A) \longrightarrow \mathcal{P}(B)$, the image-function.

Functions, mappings

Let $f\colon A \longrightarrow B$ and $B' \subseteq B$.

The inverse image (Urbild) of B' is the set

$$f^{-1}(B') = \{a \mid f(a) \in B'\} \subseteq A.$$

Functions, mappings

Let f: $A \longrightarrow B$ and $B' \subseteq B$.

The inverse image (Urbild) of B' is the set

$$f^{-1}(B') = \{a \mid f(a) \in B'\} \subseteq A.$$

$a \in f^{-1}(B')$ iff $f(a) \in B'$

Functions, mappings

Let $f\colon A \longrightarrow B$ and $B' \subseteq B$.

The inverse image (Urbild) of B' is the set

$$f^{-1}(B') = \{a \mid f(a) \in B'\} \subseteq A.$$

$a \in f^{-1}(B')$ iff $f(a) \in B'$

Again the inverse image induces a function $f^{-1}\colon \mathcal{P}(B) \longrightarrow \mathcal{P}(A)$, the inverse-image-function.

Functions, mappings

Let $f\colon A \longrightarrow B$ and $B' \subseteq B$.

The inverse image (Urbild) of B' is the set

$$f^{-1}(B') = \{a \mid f(a) \in B'\} \subseteq A.$$

$a \in f^{-1}(B')$ iff $f(a) \in B'$

Again the inverse image induces a function $f^{-1}\colon \mathcal{P}(B) \longrightarrow \mathcal{P}(A)$, the inverse-image-function.

Lemma F1: Let $f\colon A \longrightarrow B$, $A' \subseteq A$, and $B' \subseteq B$. Then

$$A' \subseteq f^{-1}(f(A')) \quad \text{and} \quad f(f^{-1}(B')) \subseteq B'$$

(in general no more than this holds)

Equality of functions

Let $f: A \longrightarrow B$ and $g: C \longrightarrow D$

Equality of functions

Let $f: A \longrightarrow B$ and $g: C \longrightarrow D$

Def. The functions $f: A \longrightarrow B$ and $g: C \longrightarrow D$ are equal iff

(1) $A = C$
(2) $B = D$
(3) for all $a \in A$, $f(a) = g(a)$.

Equality of functions

Let $f: A \longrightarrow B$ and $g: C \longrightarrow D$

Def. The functions $f: A \longrightarrow B$ and $g: C \longrightarrow D$ are equal iff

(1) $A = C$

(2) $B = D$

(3) for all $a \in A$, $f(a) = g(a)$.

dom f = dom g

Equality of functions

Let $f: A \longrightarrow B$ and $g: C \longrightarrow D$

Def. The functions $f: A \longrightarrow B$ and $g: C \longrightarrow D$ are equal iff

(1) $A = C$

(2) $B = D$

(3) for all $a \in A$, $f(a) = g(a)$.

dom f = dom g

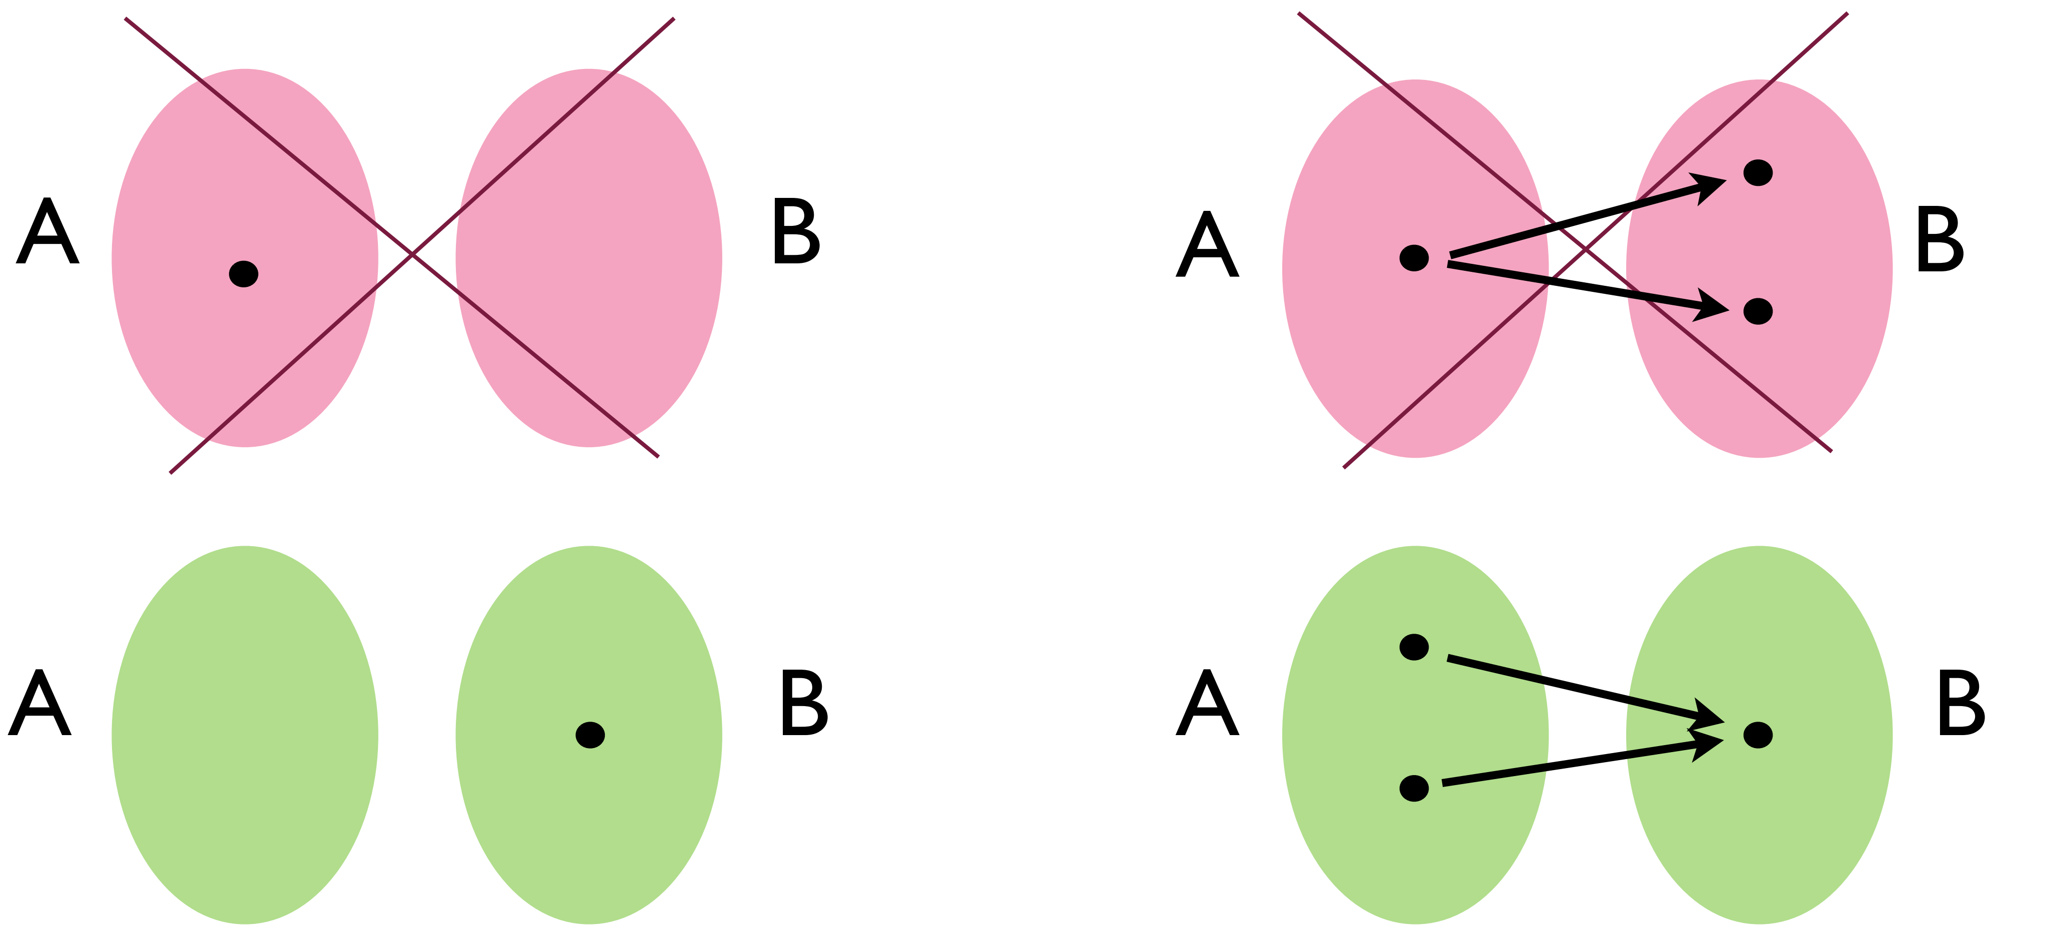
cod f = cod g

Recall…

Def. If A and B are sets, a function f from A to B, notation

$f\colon A \longrightarrow B$ is an assignment s. t.

for every $a \in A$, there exists a unique $b \in B$ such that $b = f(a)$.



Special functions

The number of ingoing arrows for a function can be 0,1, or more.
Based on this, we distinguish some special functions.

Special functions

The number of ingoing arrows for a function can be 0, 1, or more.

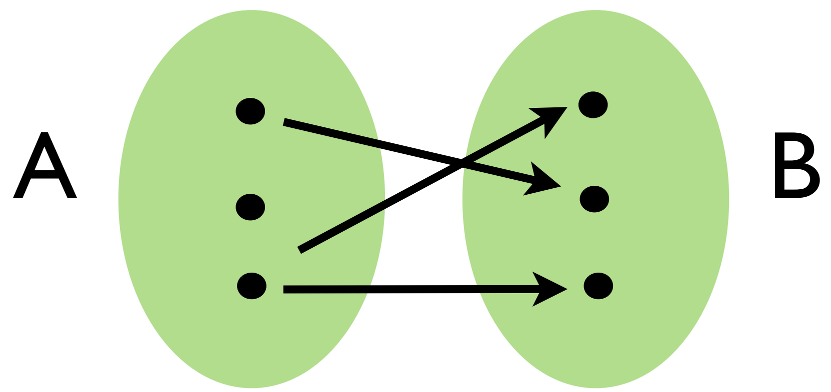
$f(f^{-1}(B')) = B'$.

Inverse function

Let $f{:}A \longrightarrow B$ be a bijection

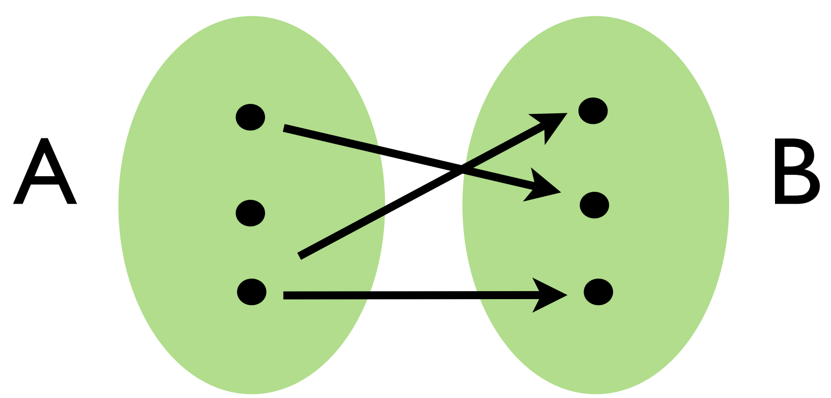
Inverse function

Let f:A $\longrightarrow$ B be a bijection



Inverse function

Let $f{:}A \longrightarrow B$ be a bijection

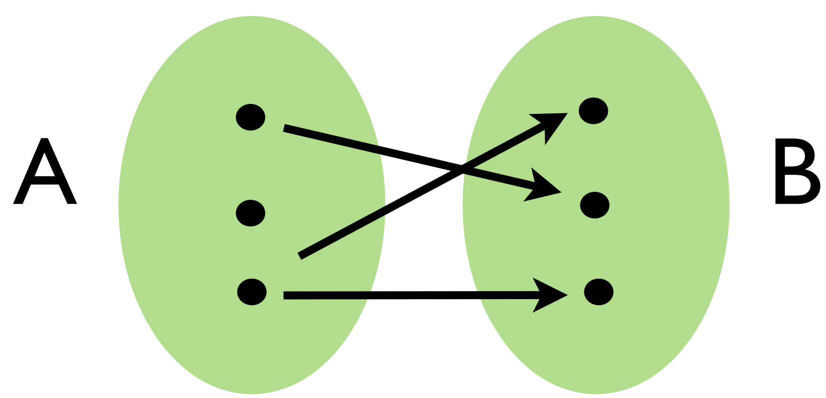


Def. The inverse function $f^{-1}: B \longrightarrow A$ is defined as

$$f^{-1}(b) = a \text{ iff } f(a) = b, \quad b \in B.$$

Inverse function

Let f:A $\longrightarrow$ B be a bijection



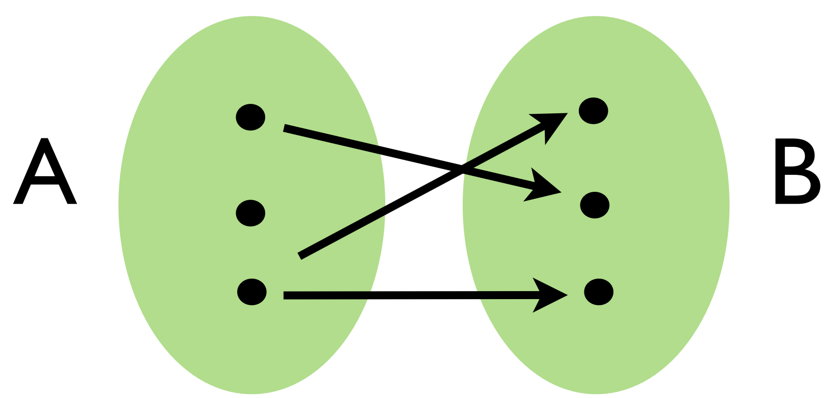
well defined only if f is bijective!

Def. The inverse function f^{-1}: B $\longrightarrow$ A is defined as

$$f^{-1}(b) = a \text{ iff } f(a) = b, \quad b \in B.$$

Inverse function

Let $f\colon A \longrightarrow B$ be a bijection



well defined only if f is bijective!

Def. The inverse function $f^{-1}\colon B \longrightarrow A$ is defined as

$$f^{-1}(b) = a \quad \text{iff} \quad f(a) = b, \quad b \in B.$$

Lemma B2: The inverse function f^{-1} for a bijection f is bijective.

Function composition

Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$

Function composition

Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$

Function composition

Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$

Def. The composition $g \circ f$ is a function $g \circ f : A \longrightarrow C$ given by

$$g \circ f\,(a) = g(f(a)), \text{ for } a \in A.$$

Function composition

Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$

"after"

$g \circ f : A \longrightarrow B \longrightarrow C$

Def. The composition $g \circ f$ is a function $g \circ f : A \longrightarrow C$ given by

$$g \circ f\,(a) = g(f(a)), \text{ for } a \in A.$$

Function composition

Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$

"after"

$g \circ f: A \longrightarrow B \longrightarrow C$

Def. The composition $g \circ f$ is a function $g \circ f: A \longrightarrow C$ given by

$$g \circ f\,(a) = g(f(a)), \text{ for } a \in A.$$

Lemma 14: Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$ be injective. Then $g \circ f$ is injective.

Function composition

Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$

"after"

$g \circ f : A \longrightarrow B \longrightarrow C$

Def. The composition $g \circ f$ is a function $g \circ f : A \longrightarrow C$ given by

$$g \circ f\,(a) = g(f(a)), \text{ for } a \in A.$$

Lemma I4: Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$ be injective. Then

$g \circ f$ is injective.

Lemma S3: Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$ be surjective. Then

$g \circ f$ is surjective.

Function composition

Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$

"after"

$g \circ f: A \longrightarrow B \longrightarrow C$

Def. The composition $g \circ f$ is a function $g \circ f: A \longrightarrow C$ given by

$$g \circ f\,(a) = g(f(a)), \text{ for } a \in A.$$

Lemma I4: Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$ be injective. Then $g \circ f$ is injective.

Lemma S3: Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$ be surjective. Then $g \circ f$ is surjective.

Corollary B2: Let $f: A \longrightarrow B$ and $g: B \longrightarrow C$ be bijective. Then so is $g \circ f$.

A characterization of bijections

A characterization of bijections

Theorem B3: A function $f\colon A \longrightarrow B$ is bijective iff there exists a function $g\colon B \longrightarrow A$ with $g \circ f = id_A$ and $f \circ g = id_B$.

A characterization of bijections

Theorem B3: A function $f: A \longrightarrow B$ is bijective iff there exists a function $g: B \longrightarrow A$ with

$$g \circ f = id_A \text{ and } f \circ g = id_B.$$

$id_A: A \longrightarrow A,$

$id_A(a) = a, \quad \text{for all } a \in A$
