

# Functions, mappings

**Def.** If  $A$  and  $B$  are sets, a function (mapping, *Abbildung*)  $f$  from  $A$  to  $B$ , notation  $f: A \longrightarrow B$  is an assignment (of elements of  $B$  to elements of  $A$ , we write  $f(a)$  for the element assigned to  $a$ ) s. t.  
for every  $a \in A$ , there exists a unique  $b \in B$  such that  $b = f(a)$ .

$\{(a, f(a)) \mid a \in A\}$  is the **graph** of the function  $f$

# Functions, mappings

When  $f: A \longrightarrow B$  then  $\text{dom } f = A$  and  $\text{cod } f = B$

domain of  $f$   
(Definitionsbereich)

codomain of  $f$   
(Wertebereich)

Let  $f: A \longrightarrow B$  and  $A' \subseteq A$ .

The image (**Bild**) of  $A'$  is the set  $f(A') = \{f(a) \mid a \in A'\} \subseteq B$ .

$$f(A') = \{b \in B \mid \text{there is an } a \in A' \text{ with } b = f(a)\}$$

if  $a \in A'$ , then  $f(a) \in f(A')$

So  $f$  extends to a function  $f: \mathcal{P}(A) \longrightarrow \mathcal{P}(B)$ , the image-function.

# Functions, mappings

Let  $f: A \longrightarrow B$  and  $B' \subseteq B$ .

The inverse image (**Urbild**) of  $B'$  is the set

$$f^{-1}(B') = \{a \mid f(a) \in B'\} \subseteq A.$$

$$a \in f^{-1}(B') \quad \text{iff} \quad f(a) \in B'$$

Again the inverse image induces a function  $f^{-1}: \mathcal{P}(B) \longrightarrow \mathcal{P}(A)$ , the inverse-image-function.

**Lemma F1:** Let  $f: A \longrightarrow B$ ,  $A' \subseteq A$ , and  $B' \subseteq B$ . Then

$$A' \subseteq f^{-1}(f(A')) \quad \text{and} \quad f(f^{-1}(B')) \subseteq B'$$

(in general no more<sub>3</sub> than this holds)

# Equality of functions

Let  $f:A \longrightarrow B$  and  $g:C \longrightarrow D$

**Def.** The functions  $f:A \longrightarrow B$  and  $g:C \longrightarrow D$  are equal iff

(1)  $A = C$

(2)  $B = D$

(3) for all  $a \in A$ ,  $f(a) = g(a)$ .

$\text{dom } f = \text{dom } g$

$\text{cod } f = \text{cod } g$

# Recall...

**Def.** If  $A$  and  $B$  are sets, a function  $f$  from  $A$  to  $B$ , notation  $f: A \longrightarrow B$  is an assignment s. t.

for every  $a \in A$ , there exists a unique  $b \in B$  such that  $b = f(a)$ .

# Special functions

The number of ingoing arrows for a function can be 0, 1, or more. Based on this, we distinguish some special functions.

at most one incoming arrow  
**injection**

at least one incoming arrow  
**surjection**

exactly one incoming arrow (injection + surjection) **bijection**

# Special functions

**Def.** A function  $f:A \longrightarrow B$  is injective iff  
for all  $a, b \in A$ , if  $f(a) = f(b)$  then  $a = b$ .

**Def.** A function  $f:A \longrightarrow B$  is surjective iff  
for all  $b \in B$ , there exists  $a \in A$  such that  $f(a) = b$ .

**Def.** A function  $f:A \longrightarrow B$  is bijective iff  
 $f$  is injective and surjective.

# Simple characterisations

**Lemma I:** A function  $f:A \longrightarrow B$  is injective iff  
for all  $b \in B$ ,  $|f^{-1}(\{b\})| \leq 1$ .

at most one incoming arrow  
injection

**Lemma S:** A function  $f:A \longrightarrow B$  is surjective iff  
 $|f^{-1}(\{b\})| \geq 1$  for all  $b \in B$  iff  
 $f(A) = B$ .

at least one incoming arrow  
surjection

**Lemma B:** A function  $f:A \longrightarrow B$  is bijective iff  
 $|f^{-1}(\{b\})| = 1$  for all  $b \in B$  iff  
 $f$  is both injective and surjective.

exactly one incoming arrow  
bijection

# Some properties

**Lemma I2:** Let  $f:A \longrightarrow B$  be injective and let  $A' \subseteq A$ . Then  
 $f(x) \in f(A')$  iff  $x \in A'$ .

if holds always!

**Prop. I3:** Let  $f:A \longrightarrow B$  be injective and let  $A' \subseteq A$ . Then  
 $f^{-1}(f(A')) = A'$ .

**Prop. S2:** Let  $f:A \longrightarrow B$  be surjective and let  $B' \subseteq B$ . Then  
 $f(f^{-1}(B')) = B'$ .

# Inverse function

Let  $f:A \longrightarrow B$  be a **bijection**

well defined only if  $f$  is bijective!

**Def.** The inverse function  $f^{-1}: B \longrightarrow A$  is defined as

$$f^{-1}(b) = a \text{ iff } f(a) = b, \quad b \in B.$$

**Lemma B2:** The inverse function  $f^{-1}$  for a bijection  $f$  is bijective.

# Function composition

Let  $f:A \longrightarrow B$  and  $g:B \longrightarrow C$

# Function composition

Let  $f:A \longrightarrow B$  and  $g:B \longrightarrow C$

“after”  
 $g \circ f : A \longrightarrow B \longrightarrow C$

**Def.** The composition  $g \circ f$  is a function  $g \circ f : A \longrightarrow C$  given by  
 $g \circ f (a) = g(f(a))$ , for  $a \in A$ .

**Lemma I4:** Let  $f:A \longrightarrow B$  and  $g:B \longrightarrow C$  be injective. Then  
 $g \circ f$  is injective.

**Lemma S3:** Let  $f:A \longrightarrow B$  and  $g:B \longrightarrow C$  be surjective. Then  
 $g \circ f$  is surjective.

**Corollary B2:** Let  $f:A \longrightarrow B$  and  $g:B \longrightarrow C$  be bijective. Then so is  $g \circ f$ .

# A characterization of bijections

**Theorem B3:** A function  $f:A \longrightarrow B$  is bijective iff there exists a function  $g:B \longrightarrow A$  with  $g \circ f = \text{id}_A$  and  $f \circ g = \text{id}_B$ .

$\text{id}_A: A \longrightarrow A,$   
 $\text{id}_A(a) = a, \text{ for all } a \in A$
